

# FreeDome

NEW, for *Bactrocera dorsalis*!

## ^^^ ECO-FRIENDLY FRUIT FLY CONTROL ^^^

**FreeDome** for Effective, Once-Per-Season Placement, Safe and Environmentally Friendly Fruit Fly Control

### The Problem

Fruit Flies are globally #1 group of quarantine pests. They are wide-spread and successful invaders, hence posing a threat to the fruit production and export industries. Current control consists of repeated poisonous spraying, and/or the use of traps attracting **males only**. Current control regimes are unfriendly, ineffective, resulting in a high fruit loss (5%-100%) and extreme difficulties to export.

### The Solution

**FreeDome** is an eco-friendly simple to use device, which controls female fruit flies by Attract & Kill, based on Biofeed's GCFR proprietary technology. Thanks to its unique mode of action **FreeDome** typically reduces infestation by 98% to 100%. Available solutions are for the most problematic species; *Bactrocera dorsalis*, *B. zonata*, *B. oleae*, *Ceratitis cosyra*, *C. capitata*, and *Dacus ciliatus*.

How **FreeDome** can help you to increase your income by **hundreds of percent**? Read [> link <](#)

### Exporters' choice

**FreeDome** is supporting Israeli fruit exporters for 20 years, without a single interception of infestation. The solution is approved by food importers in the EU and Japan.

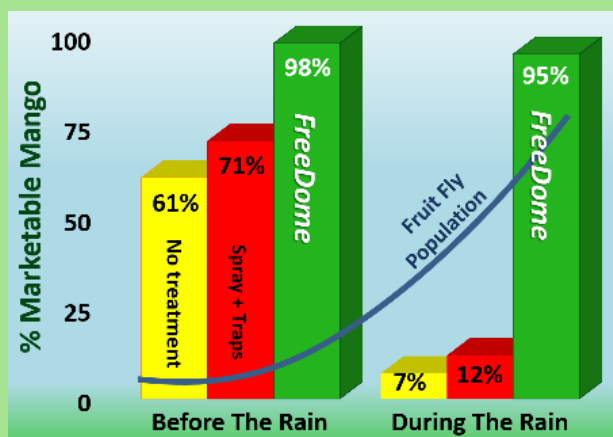

**FreeDome** is adapted to help fruit growers around the world to easily win the battle against fruit flies and start exporting, even in the case of a mixed fruit fly population, i.e. several species.

### Advantages

- Made to be safe, designed to be simple.
- Deployment - panels last for several years.
- Dispenser - replaced only once a season.
- Maintenance free.
- Friendly to humans and the environment.
- No need for a tractor or a sprayer.
- Zero contact with active ingredients.
- Maintaining ecological balance.
- Zero chemical residues in or on the fruits.
- Ensures export-grade production.
- Eliminating fruit loss to a minimum.
- Weatherproof - highly effective during rains.
- Increase farmers' ROI and revenues.

### How FreeDome Works

- **Parts:** (1) Yellow panel with a pocket;
- (2) Dispenser containing a powerful formula.
- **Simple Activation:** Puncture the dispenser. Insert it into the pocket in the yellow panel. Done!
- **Mode-of-action:** a micro-slow-release mechanism releases a few drops a day. Females fly are attracted, land on the panel, lick the bait, fly away, and shortly after drop dead.

**FreeDome**, the most effective control solution for; *Bactrocera dorsalis*, *B. zonata*, *B. oleae*, *Ceratitis cosyra*, *C. capitata*, and *Dacus ciliatus*.
